

# Release Documentation

## What is Release Documentation?

Release Documentation is a way to keep track of each deployment of new features, updates and fixes for our products. We have a standardized way of numbering each version, depending on the scope and size, and components that make up each release. In this article, we will discuss how to set the version number of each release, as well as how to create release documentation for each product that we are developing.

## Versioning

Our version numbers follow the format of X.Y.Z.

We use the following logic to determine what increments to use:

- When the deployment only contains Updates or Fixes, the value of X will increase by 1.
  - This is the most common format that you will follow.
- When new Features are added, the value of Y will increase by 1.
  - For example - adding the "Add New Patient" button to the Calls page, or adding the new Training Video Library page to the Dashboard.
  - When this value is increased, X will be reset back to "0" (for example Dashboard 3.4.0).
- A complete upheaval, revising or re-thinking of the system will increase the value of X by 1. This does not happen very often.
  - For example, the upgrade of our Dashboard from PHP to Angular was called "Dashboard 3.0" from 2.0.
  - When this value is increased, Y and Z are reset back to "0" (for example "Dashboard 3.0.0").

## Features, Updates and Fixes

A release is made up of Features, Updates and Fixes.

### Features

A feature is a major addition to the product. It is a new functionality, page, process, etc. that did not exist for the product before the release. Some examples include:

- "Add New Patient" button
- Training Video Library page
- Voicemail Requests

### Updates

An Update is a revision to something that already exists on the product. This can be an update to the data,

design, placement, functionality, etc. Some examples include:

- Updating the calculation for "Close Ratio"
- Improving the functionality of the filtering in the Call Log
- Changing the color of the alert header

### **Fixes**

A Fix is when we have fixed something that wasn't working correctly before, usually from a bug. Some examples include:

- Audio not playing correctly
- Formatting issues with the number of decimals showing
- Error messages

## **Documentation Formatting**

To setup the document, you'll want to use the structure provided in the [Help Center \(Admin\)](#) article.

1. For the Table of Contents section, the different headings will be the X.Y release numbers in descending order.

# Release Documentation - Dashboard 3

Last updated by [Elisa Marchione](#) - July 19, 2016 10:26

## Table of Contents

[Version 3.11](#)

[Version 3.10](#)

[Version 3.9](#)

[Version 3.8](#)

[Version 3.7](#)

[Version 3.6](#)

[Version 3.5](#)

[Version 3.4](#)

[Version 3.3](#)

[Version 3.2](#)

[Version 3.1](#)

[Version 3.0](#)

2. Within each X.Y release section, list each X.Y.Z release in descending order, along with the Release Date.

### Version 3.11

#### Version 3.11.4

*Release Date: July 19, 2016*

3. List each development item within its appropriate category (Features, Updates or Fixes). If there are no items of a specific component, you do not need to list that category.

## Version 3.11

### Version 3.11.4

Release Date: July 19, 2016

#### Updates

- We've added more informative messaging when a user's login access has been restricted.

#### Edit Contact's communication preferences

Please enter the following information for this contact. "\*" indicates a required field.

##### ▼ General

Role	<input type="text" value="Office Manager"/>	Primary Contact	<input checked="" type="checkbox"/>
Call Receiver	<input type="checkbox"/>	In Call Center?	<input type="checkbox"/>
Receive Drip Emails?	<input type="checkbox"/>		
Contact Status	<input type="text" value="Active"/>		

##### ▼ Reports/Alerts

Receive Daily Call Reports?	<input checked="" type="checkbox"/>	Receive Missed Call Alerts?	<input checked="" type="checkbox"/>
Receive Weekly Call Reports?	<input type="checkbox"/>	Receive First Call Alerts?	<input checked="" type="checkbox"/>
Receive Monthly Call Reports?	<input checked="" type="checkbox"/>	Access Dashboard	<input type="checkbox"/>

### Fixes

- When updating a user's profile image, the image now shows up immediately after it's been saved.

*Before - user would need to reload the page to see their profile image*

*After - image shows up immediately after saving*

- Fixed an issue where Password Reset wasn't submitting
- We've fixed the issue for Internet Explorer customers where the list of names would not show up when logging in.

## Version 3.11.3

*Release Date: July 13, 2016*

### Fixes

- We've updated the auto-logout to be 30 minutes instead of 15 minutes.
